HR Department
Kamladi, Kathmandu
Fusemachines Nepal

Dear Sir/Madam

I was pleased to learn of the available ML engineer position at Fusemachines posted on Merojob. With my Bachelor of Science in Information Technology and nine month of experience managing data-related solutions under my belt, I am confident I will be a valuable asset to your team.

In my current role as a Data Analyst at Machapuchchhre Bank Ltd, I have been afforded the unique opportunity to spearhead a project focused on big data processing. This project has allowed me to drastically expand my predictive analytics and behavior analysis capabilities. Through my management, the project has produced substantial profitable results for MBL. I am well versed in deriving viable solutions to complex business problems through data analysis and management.

During my position as Business Analyst(Data Aanalyst), I worked extensively with machine learning and data mining techniques to infer marketing insights and predict default customer. I was responsible for using data visualization techniques to increase the usability and accessibility of data for the sales and marketing departments. Working closely other departments allowed me to hone my interpersonal skills and the ability to present complex technical information to non-technical personnel.

It would be a pleasure to learn more about fusemachines's expansion plans and provide further insight into how my data analytic abilities, experience managing large data sets, robust predictive analytics, and machine learning skills can help your company achieve these results.

Thank you for your time and for considering my candidacy for this position. I look forward to hearing from you in the near future to schedule an interview.

Yours truly,
Suman Magar
